Wiam Salih

UX & Product Designer · Cornell Tech M.S. Connective Media

ws553@cornell.edu · 571.585.3788 · New York, NY · Portfolio: wiamsalih.github.io · linkedin.com/in/wiam-salih-454069241

PROFILE

User-centered designer and forward learner who turns complex financial and everyday information into clear, trustworthy experiences. I work across user research, user flows, Figma prototyping, and front-end builds, and my engineering background at AWS and Leidos helps me design products that can actually ship.

EDUCATION

Cornell University, Cornell Tech — M.S. Connective Media — Expected 2028

George Mason University — B.S. Information Technology — May 2026

DESIGN PROJECTS

Bridge: Medical Equipment Approval App — Cornell Tech · Team of 4

- Co-designed a mobile app that maps the insurance approval journey for medical equipment, flagging stalled steps, explaining denials in plain language, and accepting voice and photo input. Personas and a competitive analysis of four tools showed none gave patients a full view.
- **My role:** wrote the ecological and interactive storyboard scenarios for our parent-caregiver persona and presented the product's core features.

frio: Smart Fridge App for Reducing Food Waste — Figma · Figma Make

- Designed a smart-fridge companion that tracks temperature, expiration dates, and inventory, then plans meals around shared ingredients so food is used before it spoils ("3 dinners, less waste").
- Prototyped a conversational meal-prep assistant that asks for household size, dietary needs, and budget, plus an in-app grocery market with search and filters; took it from storyboards to a published interactive prototype.

Portfolio Management Dashboard — Tableau

- Designed a client-oriented investment dashboard around practical portfolio questions, using clear information hierarchy to bring asset allocation, performance attribution, and risk into one view that is easy to scan and explain.

Second Serving: Campus Food Waste Platform — Web app · Product analytics

- Took a campus food-waste initiative from concept to a deployed web app that connects students with leftover event food.
- Instrumented 13 user events to power funnel, retention, and A/B test dashboards that show what drives participation.

RESEARCH

Trust and Decision-Making in AI Interfaces — Studied how technical expertise shapes trust in AI systems and produced evidence-based recommendations for explainable, accessible, and trustworthy interfaces.

EXPERIENCE

Leidos — FAA Contract — Systems Integration Test Engineer — May 2026 – Jul 2026

- Partnered with FAA customers to clarify requirements, demonstrate functionality, and document issues, translating end-user needs for engineering teams on mission-critical air traffic management software.

Amazon Web Services — Cloud Support Engineer Intern — May 2025 – Aug 2025

- Developed and tested an internal Amazon Lex conversational assistant supporting 1,000+ cloud support cases.

George Mason University, Cyber Security Engineering — Technical Assistant — Aug 2024 – May 2026

- Designed dashboards around stakeholder needs, turning operational data into clear, actionable insights for leadership.

LaunchBox Accelerator, Trinity College Dublin — Product Development Lead — May 2023 – Jul 2023

- Used user research and product analytics to find pain points in the onboarding flow and redesigned the user journey, increasing user activation by 15%.
- Prototyped, tested, and iterated an analytics platform from concept to MVP in eight weeks with engineering and business stakeholders.

SKILLS

Design	User-centered design, user flows, information architecture, interaction design, prototyping, data visualization
Research	User research, personas, storyboarding, competitive analysis, product analytics, A/B testing
Tools	Figma, Figma Make, Tableau, Oracle Analytics, Amazon QuickSight
Technical	HTML, CSS, JavaScript, Python, SQL, Java; LLMs and prompt engineering
Leadership	Co-Founder, Sustainable Cornell Tech; Volunteer Mentor & Tutor, NYC First K-12 Initiative
